

AeroSpace Cheat Sheet

i3-style tiling window manager for macOS

modifier key = **Alt** (⌘)

How it works. Every window is a leaf in a tree that AeroSpace tiles to fill the screen — no overlapping, no manual placement. Splitting direction alternates as you nest. You get **9 numbered workspaces** (virtual desktops that don't animate like macOS Spaces). Two extra **modes** — **resize** and **service** — remap the keyboard temporarily so single keys do the work; press **esc** to return to normal.

MAIN Focus & launch

⌘ + H J K L Move focus left / down / up / right
Highlights the neighbouring window in that direction.

⌘ + ⌘ Open a terminal
Launches a new ghostty window (`open -na ghostty`).

MAIN Move & resize windows

⌘ + ↑ + H J K L Move window left / down / up / right
Swaps the focused window with its neighbour in the tree.

⌘ + - Shrink focused window
Smart resize by 50px along its split axis.

⌘ + = Grow focused window
Smart resize by 50px along its split axis.

⌘ + ↑ + F Fullscreen toggle
Focused window fills the monitor; press again to restore tiling.

MAIN Layout

⌘ + / Toggle tiles horizontal / vertical
Flips whether the current container splits side-by-side or stacked.

⌘ + , Toggle accordion layout
Collapses siblings into a stack showing one at a time (like tabs).

MAIN Workspaces

⌘ + 1 ... 9 Switch to workspace 1–9
Jumps to that virtual desktop.

⌘ + ↑ + 1 ... 9 Send window to workspace 1–9
Moves the focused window there; focus stays put.

⌘ + Tab Back-and-forth
Toggle between current and previously focused workspace.

⌘ + ↑ + Tab Workspace to next monitor
Moves the whole workspace to the next display (wraps around).

RESIZE enter with ⌘ + R

H / L Narrower / wider
Adjusts width by 50px per press.

J / K Taller / shorter
Adjusts height by 50px per press.

⌘ / esc Back to main mode
Leaves resize mode.

SERVICE enter with ⌘ + ↑ + ;

esc Reload config
Re-reads `aerospace.toml`, then returns to main. Use after editing.

R Reset layout tree
Flattens the workspace so windows re-tile evenly.

F Toggle float / tile
Pops the focused window out of tiling (or back in).

⌘ Close all but current
Closes every other window in the workspace.

⌘ + ↑ + H J K L Join with neighbour
Merges the focused window into the adjacent container in that direction.

AUTO Automatic behaviour

1Password Always floats
Detected by bundle id `com.1password.1password` and set to floating layout.

Login Starts automatically
`start-at-login = true` — AeroSpace launches when you log in.

Gaps 8px everywhere
Inner and outer gaps between windows and screen edges.

Applying changes. This config is managed by chezmoi. After editing the source, run `chezmoi apply` to deploy it to `~/config/aerospace/aerospace.toml`, then reload it live with `⌘ + ↑ + ;` then `esc` (service mode → reload-config). · Full reference: nikitabobko.github.io/AeroSpace/guide
